# Preface

This “Tools for Outreach” catalogue is meant to be a resource for anyone interested in obtaining information on freshwater mussels. While by no means all inclusive, it provides the user with a range of tools to find the materials and people to answer questions, design educational units, and understand this fauna.

Consider the materials in this book to be dynamic. There is no guarantee that all listed resources will be available or that the listed contact will be found at the given points of reference. Be persistent. There are default resources in other sections which may be adequate substitutes or a alternate path to the item you were originally in need of.

The authors welcome your feedback and additions to make this the best tool possible. Please direct comments to :

# Contacts

Note: In most states, responsibility for mussels rests with the state natural resources agency such as the Game and Fish Commission, Department of Conservation, etc. Generally, within these agencies it is the fisheries bureau or the endangered resources bureau which has the expertise on mussel resources. Inquiries directed to these entities will usually result in being directed to the correct person or people. The Freshwater Mollusk Conservation Society maintains an active membership directory of specialists who work with virtually all aspects of freshwater mussels.

Numerous excellent articles (too many to list!) have occurred in the popular press. We suggest that individuals use local library resources and internet search engines to locate articles and publications. Key words might include : Mussels, shells, clams, and pearls for a start. In the last 10 years, very fine articles have appeared in Smithsonian, Audubon, and National Geographic magazines. State natural resource agencies also publish monthly or bi-monthly "outdoors" magazines which have showcased mussels. Examples include the Minnesota Conservation Volunteer; North Dakota Outdoors, and Wisconsin Natural Resources. Don't forget that technical libraries on certain campuses would have technical publications such as keys and literature found in professional journals such as the North American Benthological Society.
