

The 2021 FMCS checklist of 729 freshwater gastropods from Canada and the United States. Column headings are taxon (binomen) and species author(s), and AFS common names (Classification Uncertain denotes uncertain taxonomic status under common names), Family names are followed by the number of genera and species (or monotypic). Species names denoted in **BLUE LETTERS** signify petition changes completed in 2019. Species names denoted in **RED LETTERS** signify petitioned changes completed in 2021. The goal of the FMCS Names Subcommittee is to improve science communication, provide up-to-date authoritative checklists and promote freshwater mollusk systematics research. Stakeholders are under no obligation to follow the taxonomic opinions expressed in this list.
